PATENT

- Mobile
- Simple bead rolling change

The large selection of beading rollers that can be manufactured to customer requirements neatly completes this attractive offering. The beading rollers for the new MABI Logo can also be used on the 4DS duo beading machine as well as the MABI Clou.

The design resembles a wheelbarrow, which reflects the easy handling of the MABI Logo, as the machine is ready to run with just one manoeuvre.

The high-power motor guarantees carefree operation, even with thick sheets as well as chromium steel. Thanks to the high quality of the components used, the MABI Logo is practically maintenance-free, thus ensuring the customer will enjoy many years of continuous use.
